- **Coding**

- Get and parse json data from url:

  - http://7516803.sinaapp.com/CouchPotato/ChannelListSatellite.json

- Show the items in ListView

  - Only item name is shown

- Popup or toast the item detail information when click on one of the items

  - It is OK to simply combine the item information into one string: name, abbre, url etc.

- Note:

  - Please use thirdparty/opensource SDK when parse json data.

  - Please use the system ListView control when show items.

  - Please zip the project files with .zip format when sending email.
